

# MnDOT.gov/DresbachBridge

 **RECYCLED MATERIALS**

## Concrete and Blacktop

These materials were trucked off site, crushed, and reused on the project as a recycled road base.

## Light Poles and More

MnDOT is reusing the light poles, guardrail posts, and plate beams from the project. These items will be reused at locations where crashes or knockdowns cause damage.

## Steel

Structural steel items like the bridge beams and overhead sign structures were brought to a local recycler in La Crosse, Wisconsin. Some of the beams were re-sold to be reused as temporary bridges.

The reinforcing steel from the concrete pavement and structures was separated and also sent to the recycler.
